

# Group-based Emotions in Teams of Humans and Robots

---

Filipa Correia, Samuel Mascarenhas, Rui Prada, Francisco S. Melo & Ana Paiva

What are  
Group-based Emotions?

No attribution of membership

Individual-based Emotions

**Attribution of membership** to that social group

+

**Event** is relevant for a social group

Group-based Emotions

# Motivation to analyse GbE in HRI

# Motivation

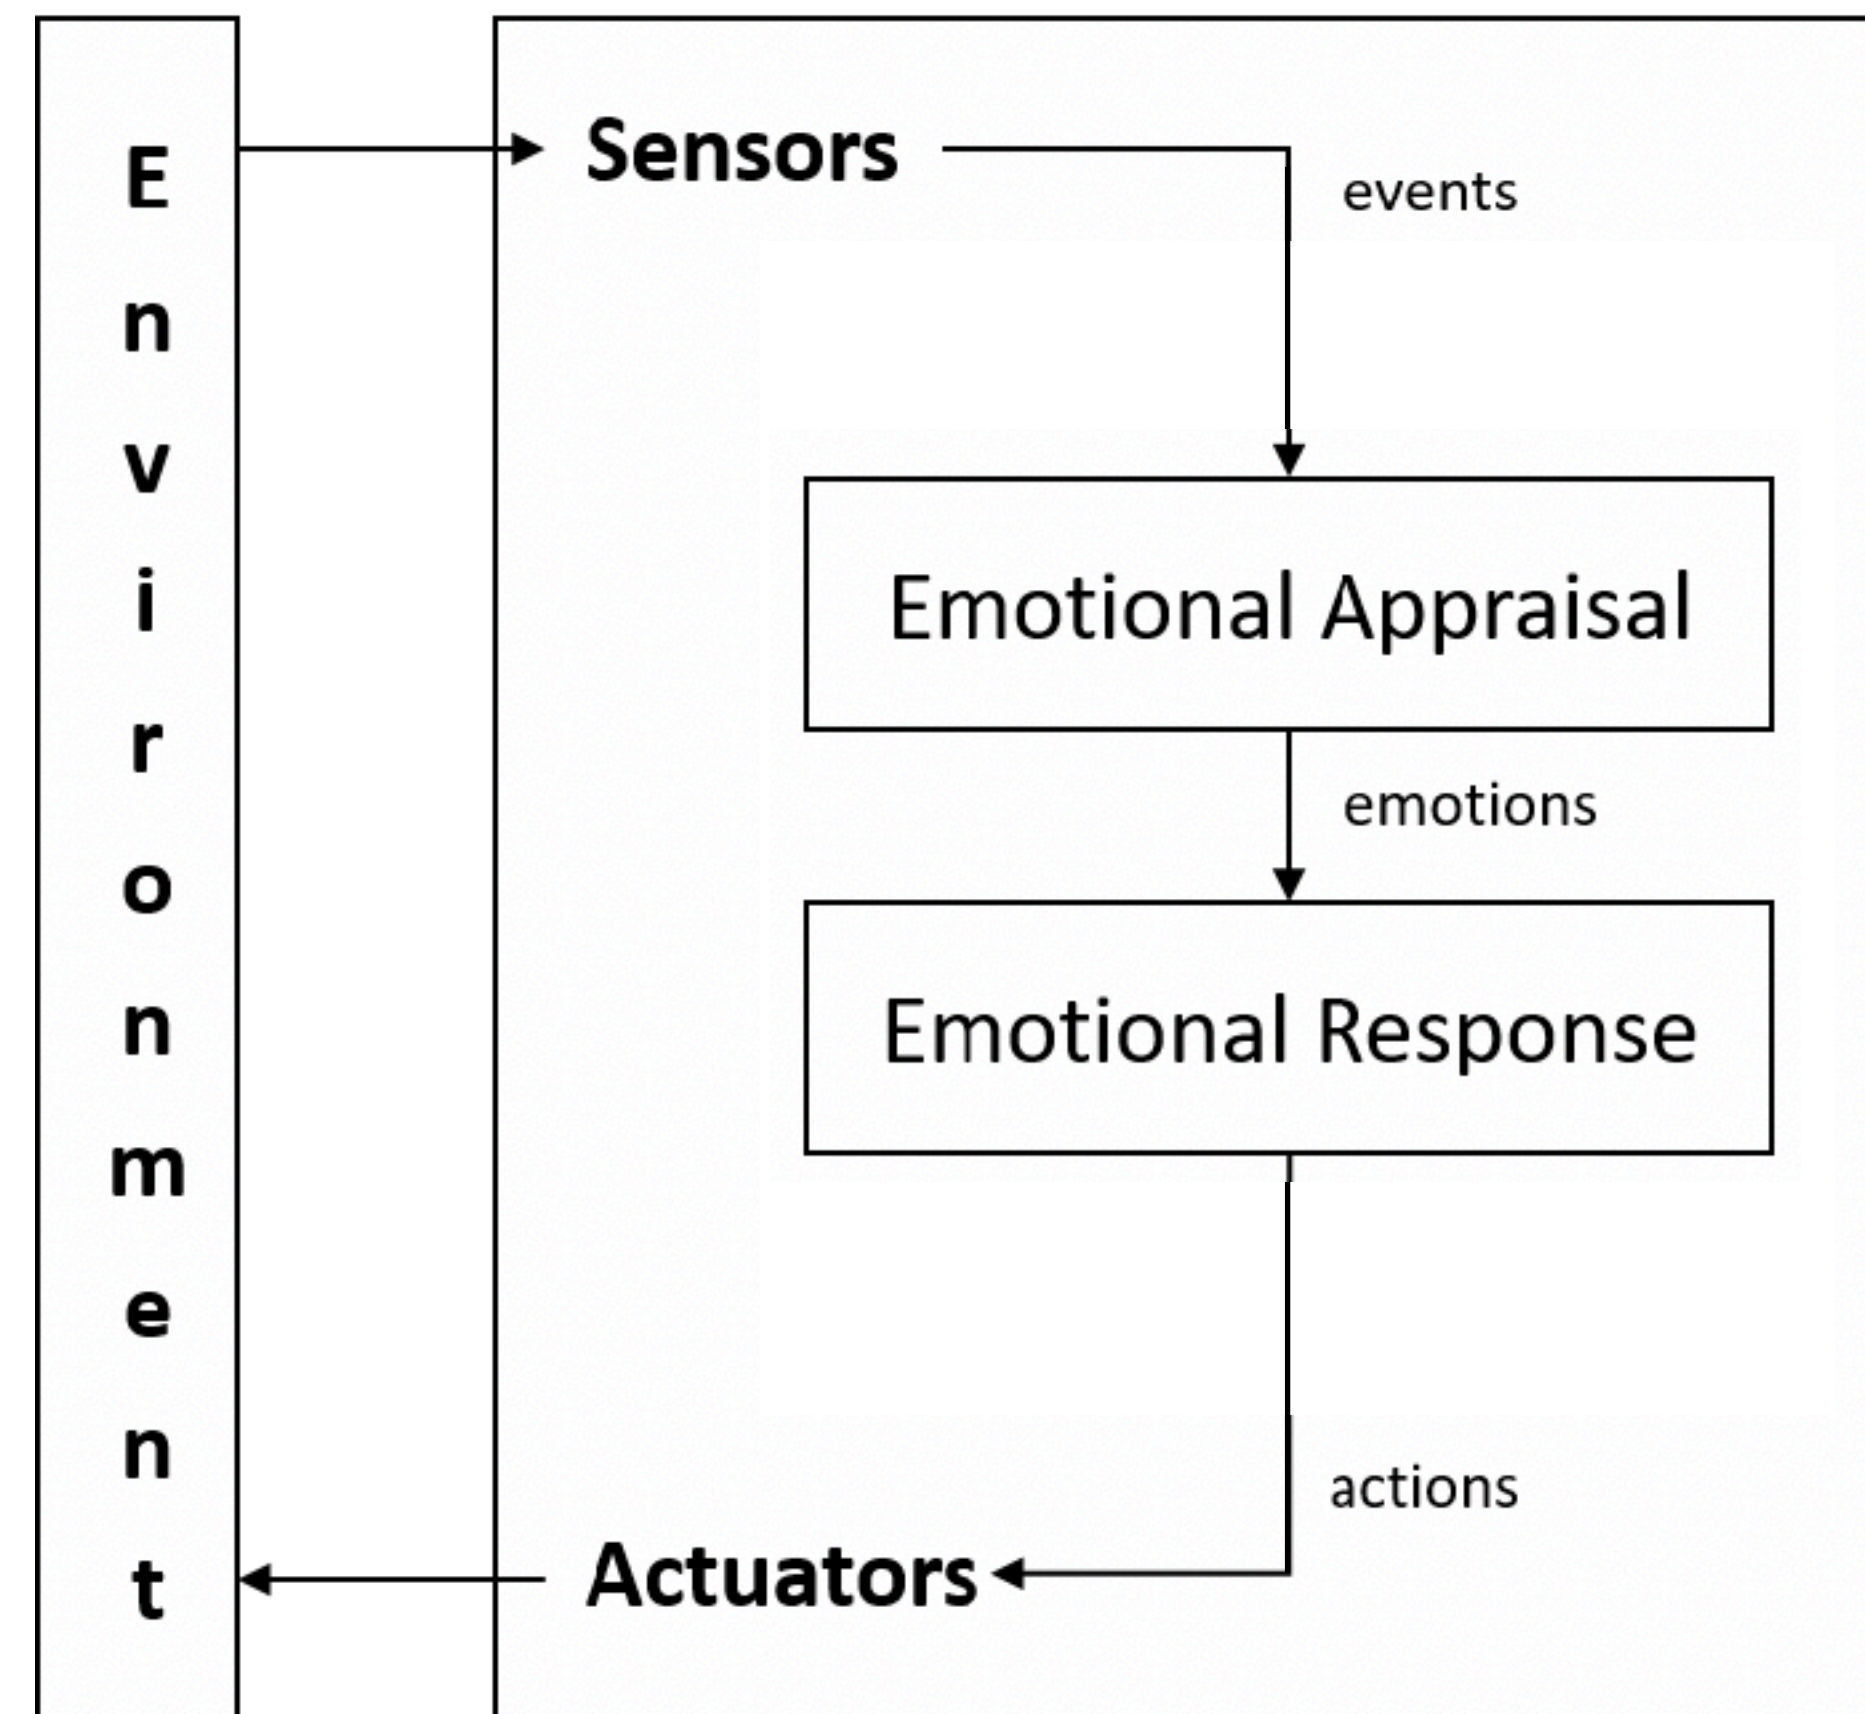

---

- Intergroup interactions
- Cohesion of the social group
- Trust and Group Identification may lead to positive team performance

# Current models for generation of emotions

A model for GbE in  
social robotic characters

Based on the psychological model of GbE [1]

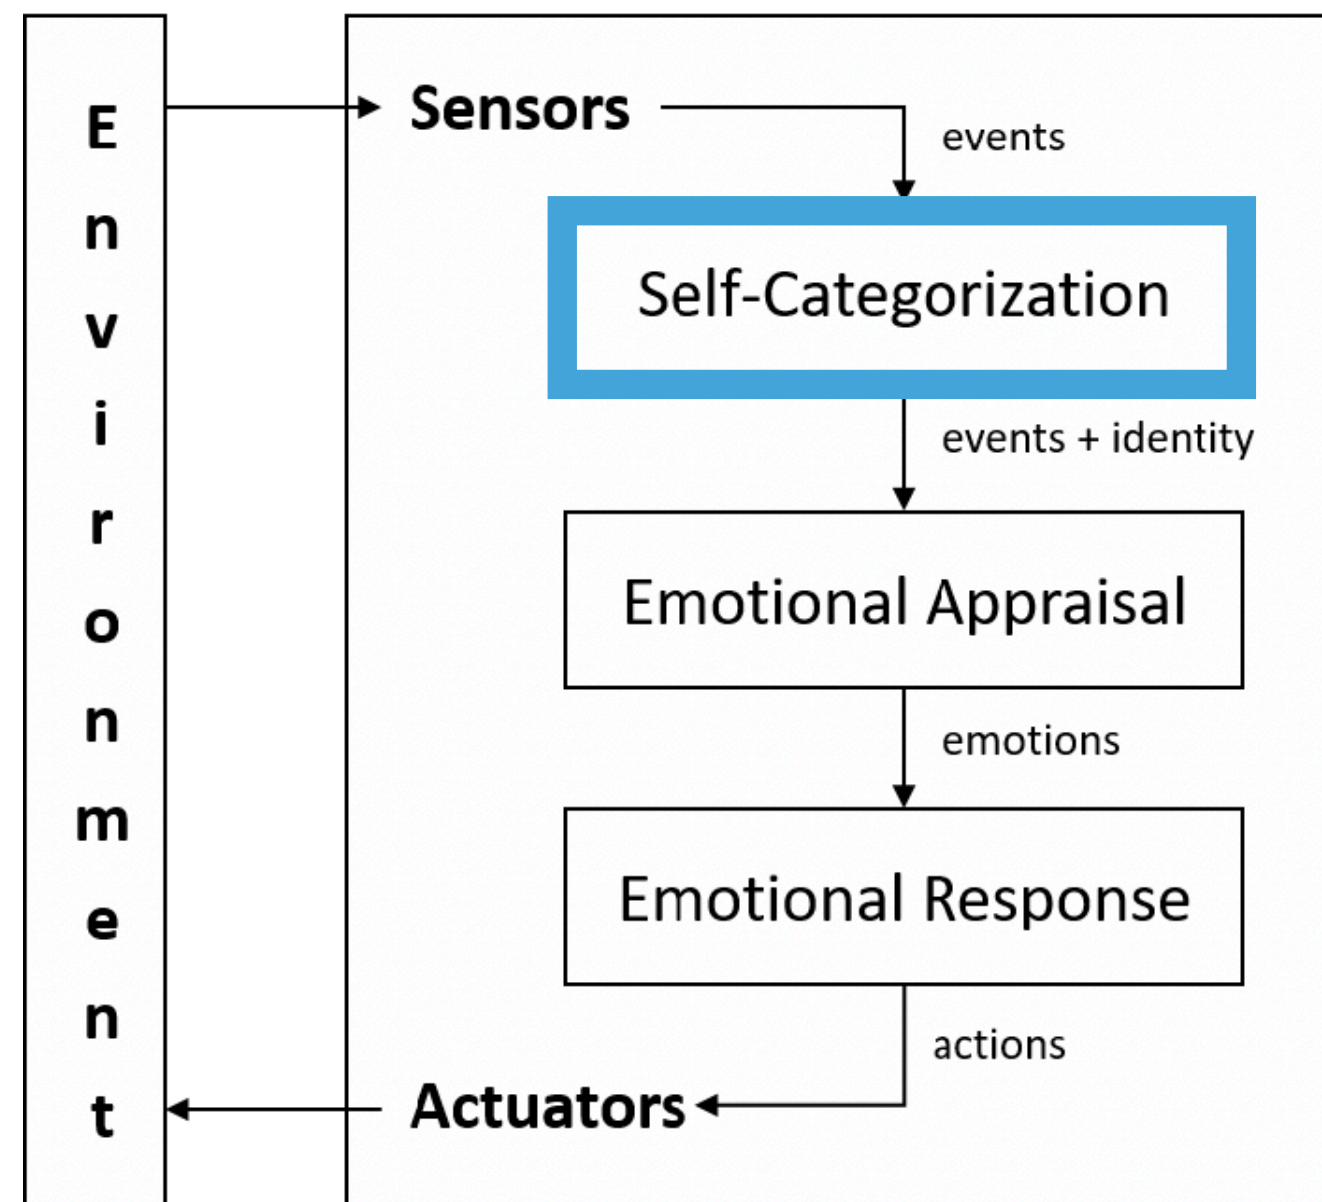

[1] Goldenberg, Amit, et al. "The process model of group-based emotion: Integrating intergroup emotion and emotion regulation perspectives." *Personality and Social Psychology Review* 20.2 (2016): 118-141.

Scenario

# Card game scenario

---

- Trick-taking card game
- 2 adversarial teams
- Winning team is the one with more points
- In-group
- Out-group

# Hypotheses

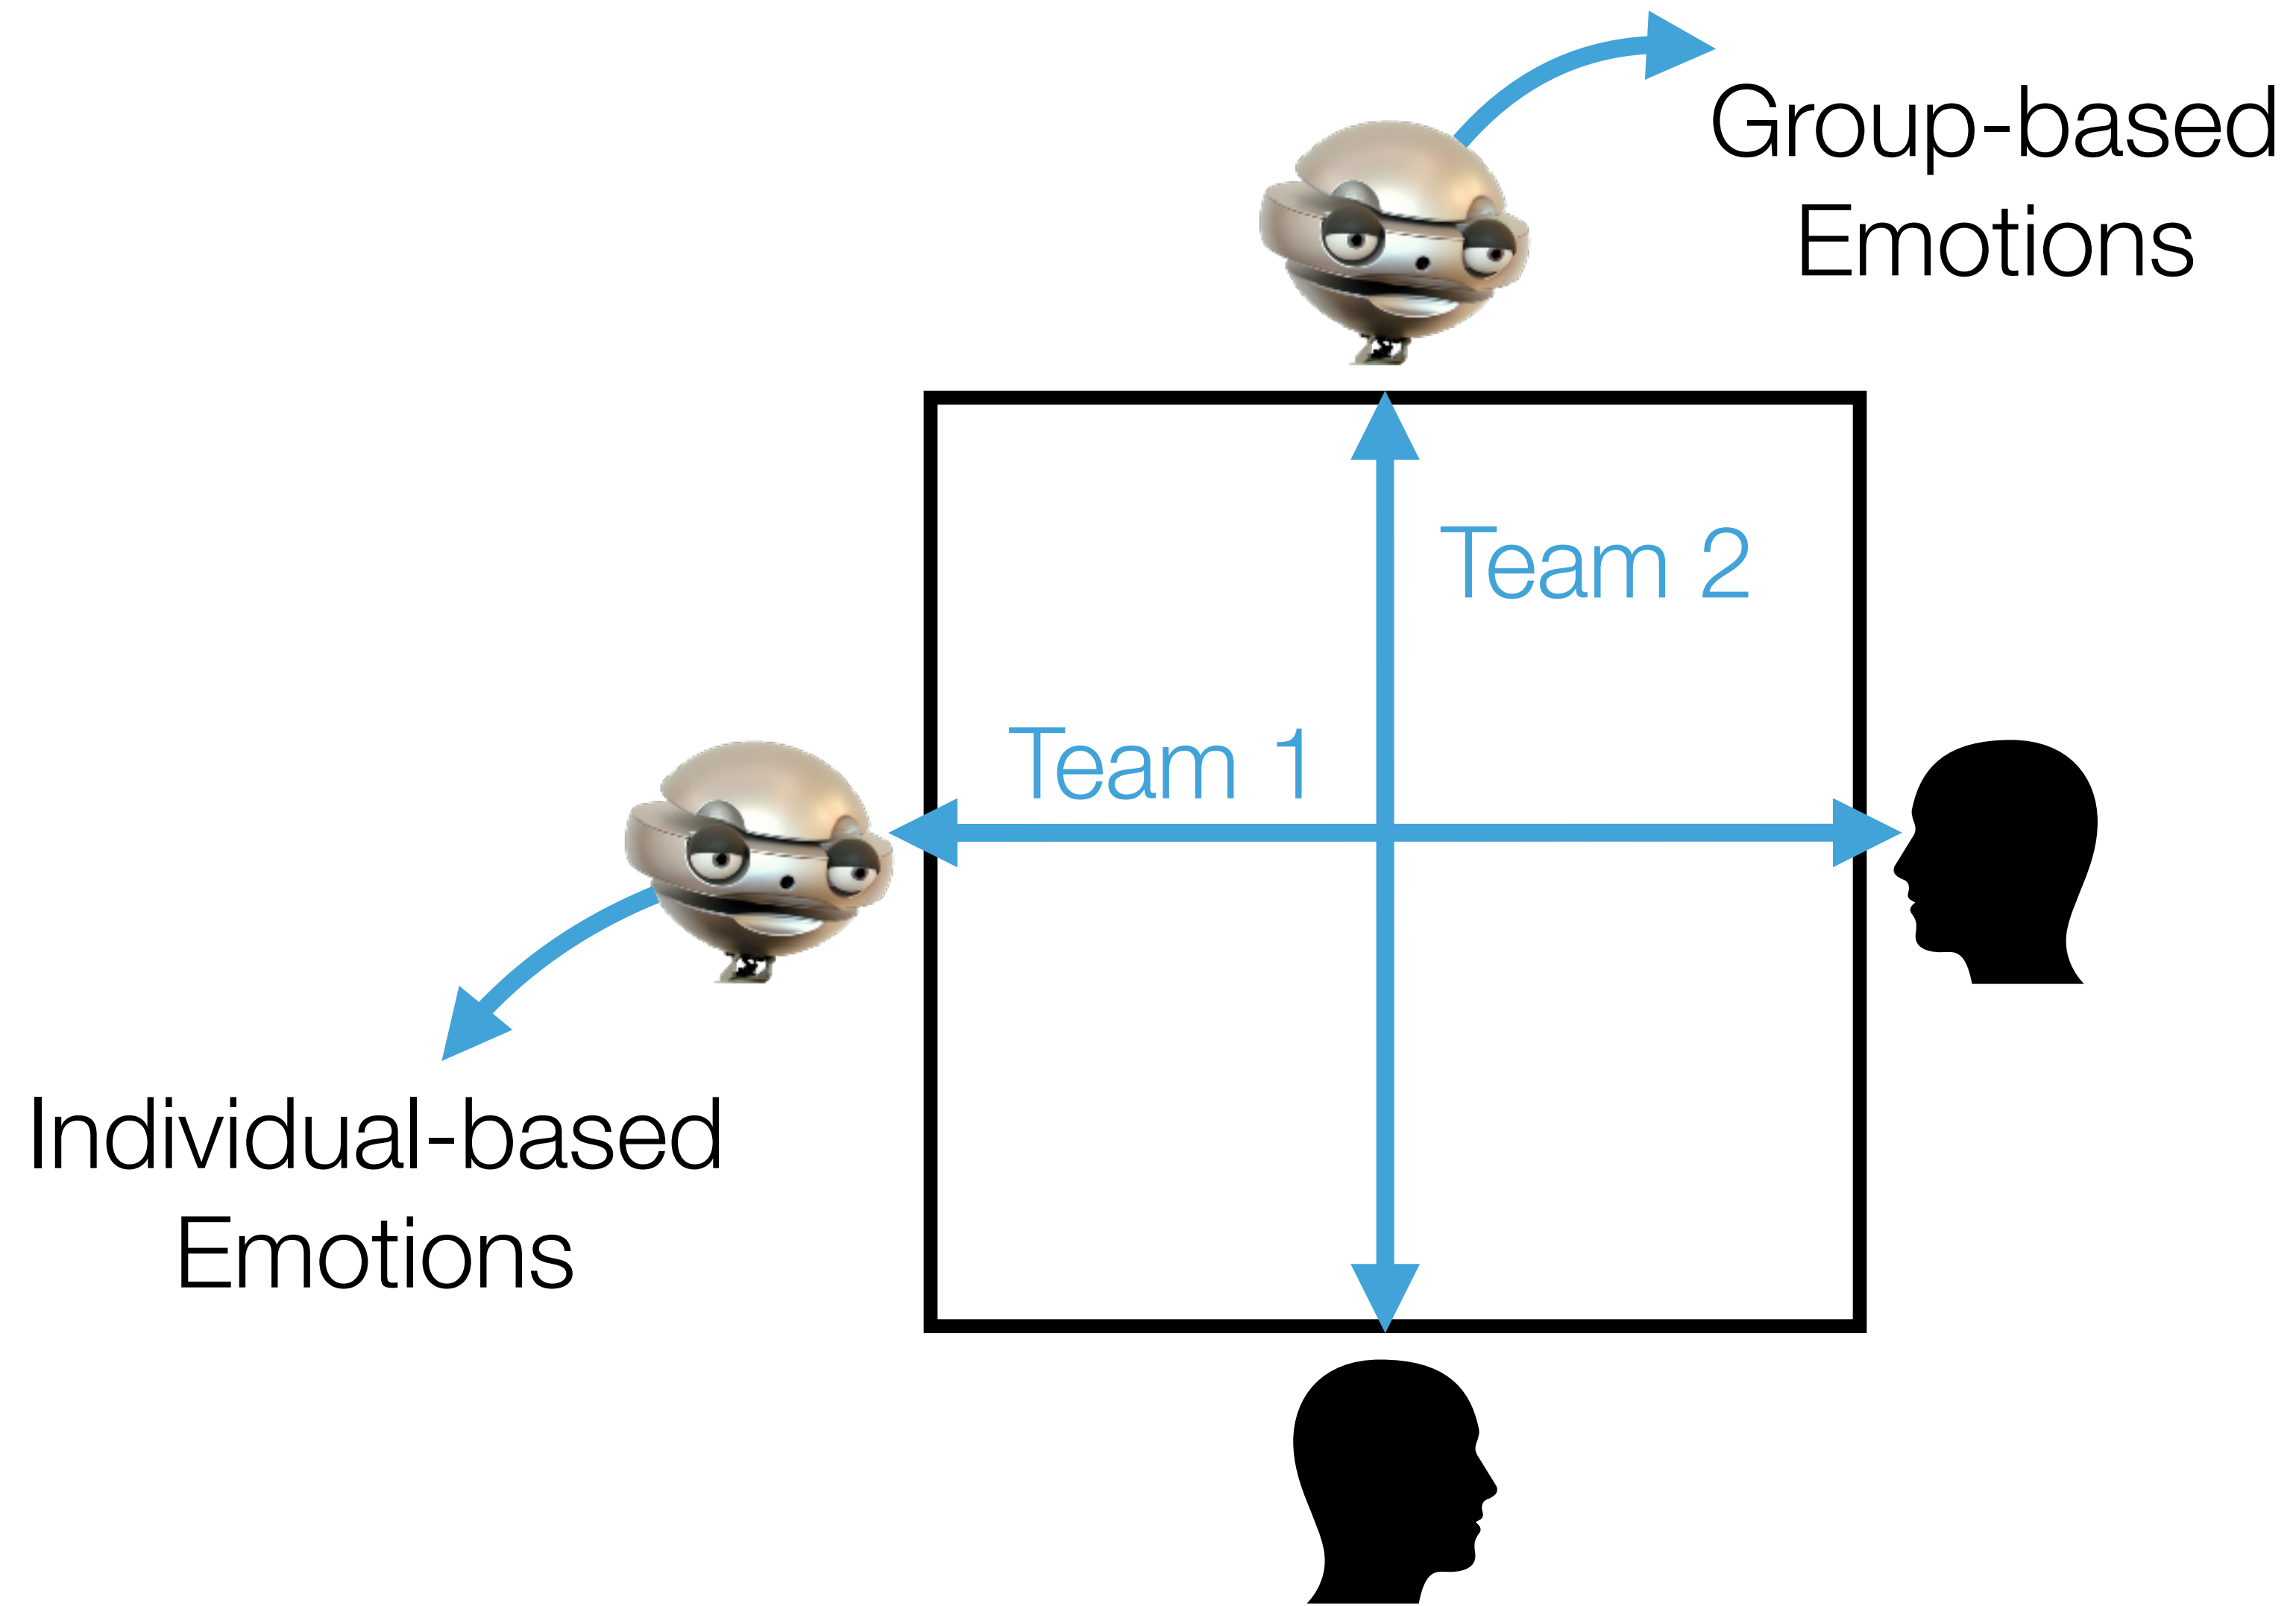

# Hypotheses

---

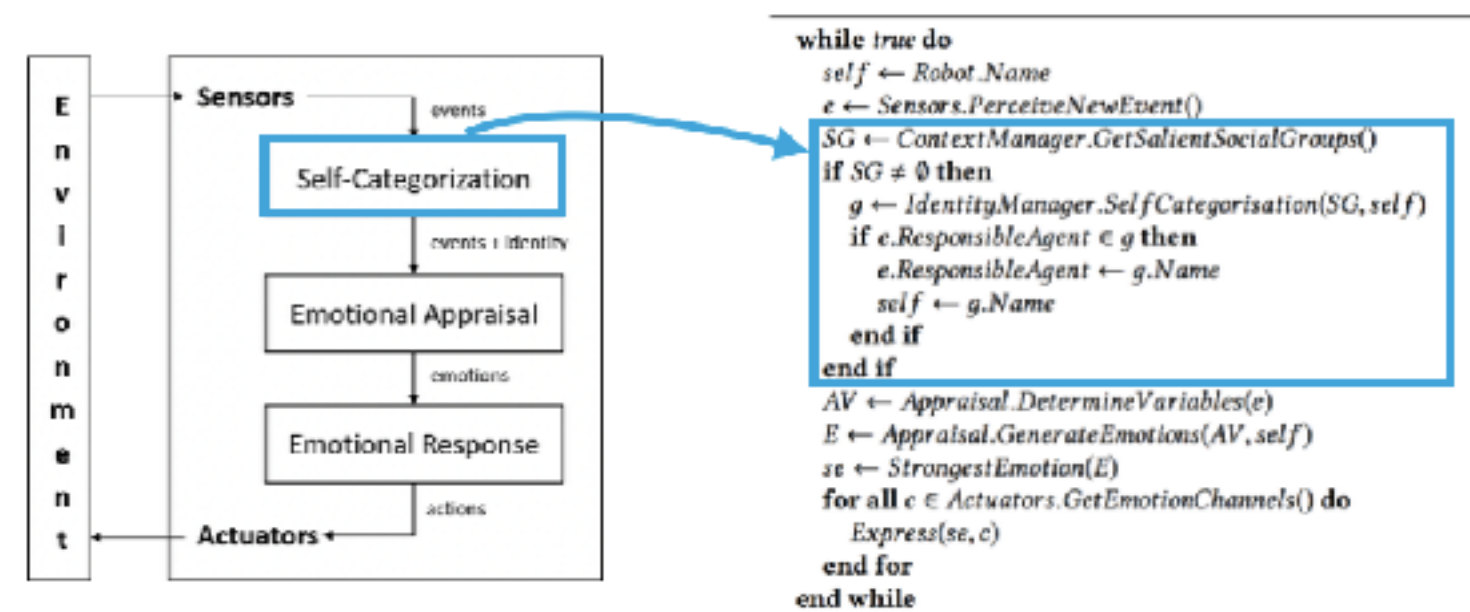

- **H1**: Participants will have a **stronger Group Identification** with a robotic partner that expresses GbE.
- **H2**: Participants will have a more **positive perception** of a robotic partner that expresses GbE.
- **H3**: Participants will have a **higher degree of Group Trust** with a robotic partner that expresses GbE.

Applying the model

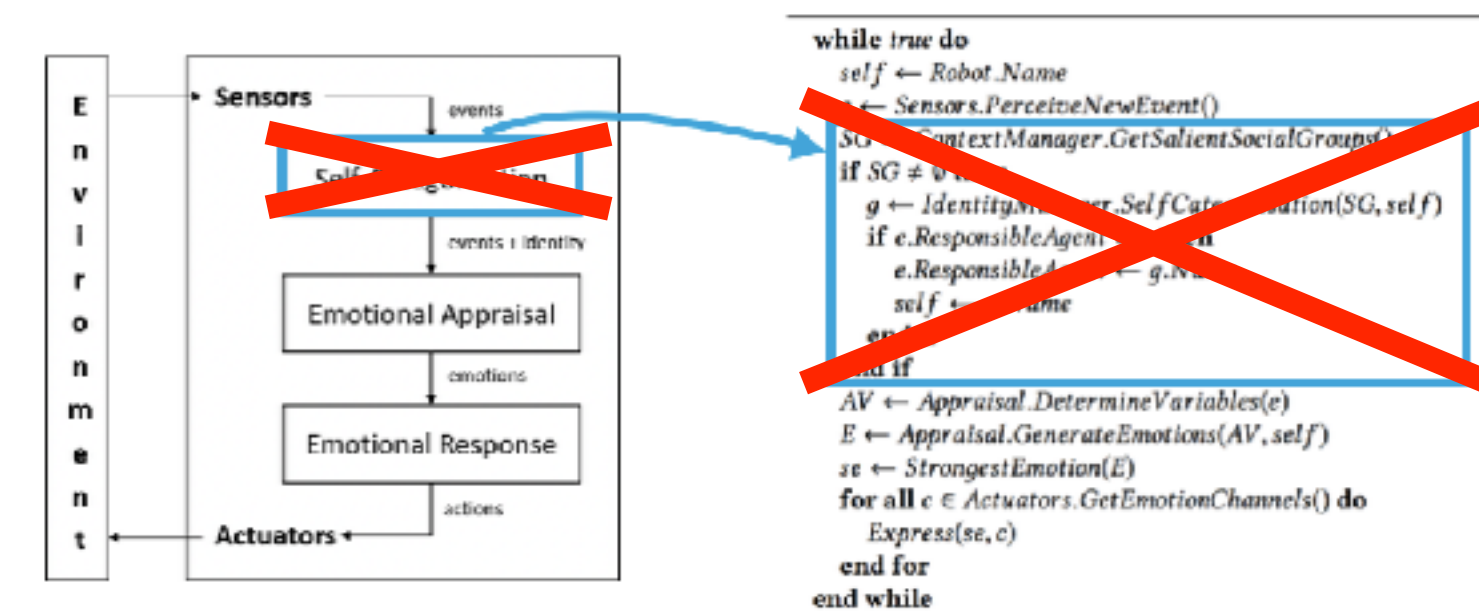

# How?

Group-based Emotions

Individual-based Emotions

# How?

---

## Group-based Emotions

Assuming the robot is P1 and  $\{P1, P3\} \in T1$

## Individual-based Emotions

Assuming the robot is P1 and  $\{P1, P3\} \in T1$

# How?

---

## Group-based Emotions

Assuming the robot is P1 and  $\{P1, P3\} \in T1$

Event(P3, IncreasePoints(Trick, 11))

## Individual-based Emotions

Assuming the robot is P1 and  $\{P1, P3\} \in T1$

Event(P3, IncreasePoints(Trick, 11))

# How?

## Group-based Emotions

Assuming the robot is P1 and  $\{P1, P3\} \in T1$

Event(P3, IncreasePoints(Trick, 11))

```
{T1, T2} ← ContextManager.GetSalientSocialGroups()
T1 ← IdentityManager.SelfCategorisation(SG, self)
```

If  $P3 \in T1$

Then,

- Event(**T1**, IncreasePoints(Trick, 11))
- Self ← **T1**

## Individual-based Emotions

Assuming the robot is P1 and  $\{P1, P3\} \in T1$

Event(P3, IncreasePoints(Trick, 11))

# How?

## Group-based Emotions

Assuming the robot is P1 and  $\{P1, P3\} \in T1$

Event(P3, IncreasePoints(Trick, 11))

Appraisal

Pride\*

\* Using a OCC Theory of Appraisal

## Individual-based Emotions

Assuming the robot is P1 and  $\{P1, P3\} \in T1$

Event(P3, IncreasePoints(Trick, 11))

# How?

## Group-based Emotions

Assuming the robot is P1 and  $\{P1, P3\} \in T1$

Event(P3, IncreasePoints(Trick, 11))

Appraisal

Pride

## Individual-based Emotions

Assuming the robot is P1 and  $\{P1, P3\} \in T1$

Event(P3, IncreasePoints(Trick, 11))

Appraisal

Admiration\*

\* Using a OCC Theory of Appraisal

# What are their Emotional Responses?

---

Using the verbal utterances!

Group-based  
Emotions

Individual-based  
Emotions

Ex: Partner increases the points

—“We are the  
best!” (Group Pride)

—“I am impressed with  
your move!” (Admiration)

# What are their Emotional Responses?

---

Using the verbal utterances!

Group-based  
Emotions

Individual-based  
Emotions

Ex: Partner increases the points

—“We are the best!” (Group Pride)

—“I am impressed with your move!” (Admiration)

Ex: Robot decreased the points

—“Sorry partner, for this unfortunate move.” (Group Shame)

—“I am so ashamed of my move...” (Individual Shame)

# What are their Emotional Responses?

---

Using the physical posture!

**(a) Joy**

**(b) Pride**

**(c) Admiration**

**(d) Distress**

**(e) Shame**

**(f) Reproach**

# User Study

# Measures

---

Towards the robotic partner:

- Group Identification [1] (Satisfaction, Solidarity)
- Godspeed [2] (Anthropomorphism, Animacy, Likeability, Perceived Intelligence)
- Group trust [3]

"**Exploring trust, group satisfaction, and performance in geographically dispersed and co-located university technology commercialization teams.**" *VentureWell. Proceedings of Open, the Annual Conference*. National Collegiate Inventors & Innovators Alliance, 2004.

# Procedure

---

- Briefing and consent form
- Explain the rules and play an example game (without the robots)
- Random draw to assign the robotic partner
- 3 games with the robots
- Questionnaire
- Random draw of a cinema ticket
- Debriefing

45 minutes

**MULTI  
TACTION**  
MultiTaction Call 55°  
protective calibration sheet  
Do not disturb - Keep quiet  
See the MultiTaction user manual for more details  
[www.multitaction.com](http://www.multitaction.com)

# Sample

---

- 48 university students (24 sessions)
  - 33 males and 15 females
  - [19 - 33] years old ( $M = 25.02 \pm 2.98$ )

# Results

---

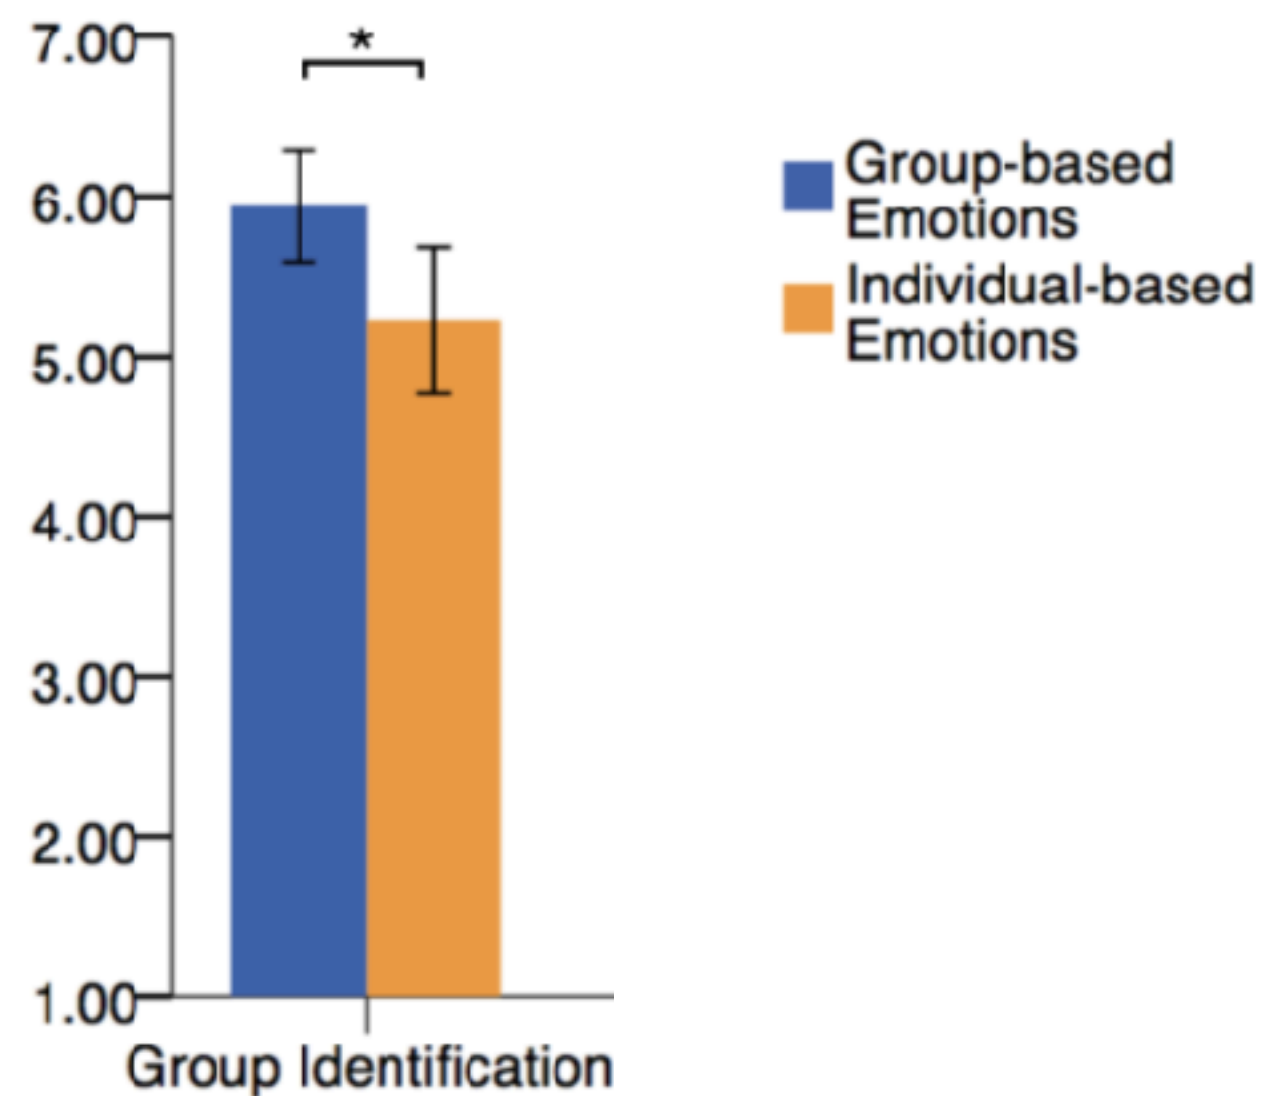

- Game scores were balanced
  - Team GbE won 10 times, lost 11 and tied 3
  - Team IbE won 11 times, lost 10 and tied 3
- The number of expressed emotions between robots was balanced
  - However, there were more positive emotions than negative emotions

# Results - Group Identification

---

- Participants had **significantly higher** levels ( $U = 175.5$ ,  $p = 0.02$ ,  $r = 0.335$ ) of **Group Identification** towards the robotic partner with GbE than towards the robotic partner with IbE.

## Results - Group Identification

---

- There was a **non-significant correlation** ( $r_s = 0.153$ ,  $p = 0.30$ ) between **the number of points** of the team and the level of **Group Identification**

# Results - Group Trust

---

- Participants had **significantly higher** levels ( $U = 148$ ,  $p < 0.01$ ,  $r = 0.417$ ) of **Group Trust** towards the robotic partner with GbE than towards the robotic partner with IbE.

## Results - Group Trust

---

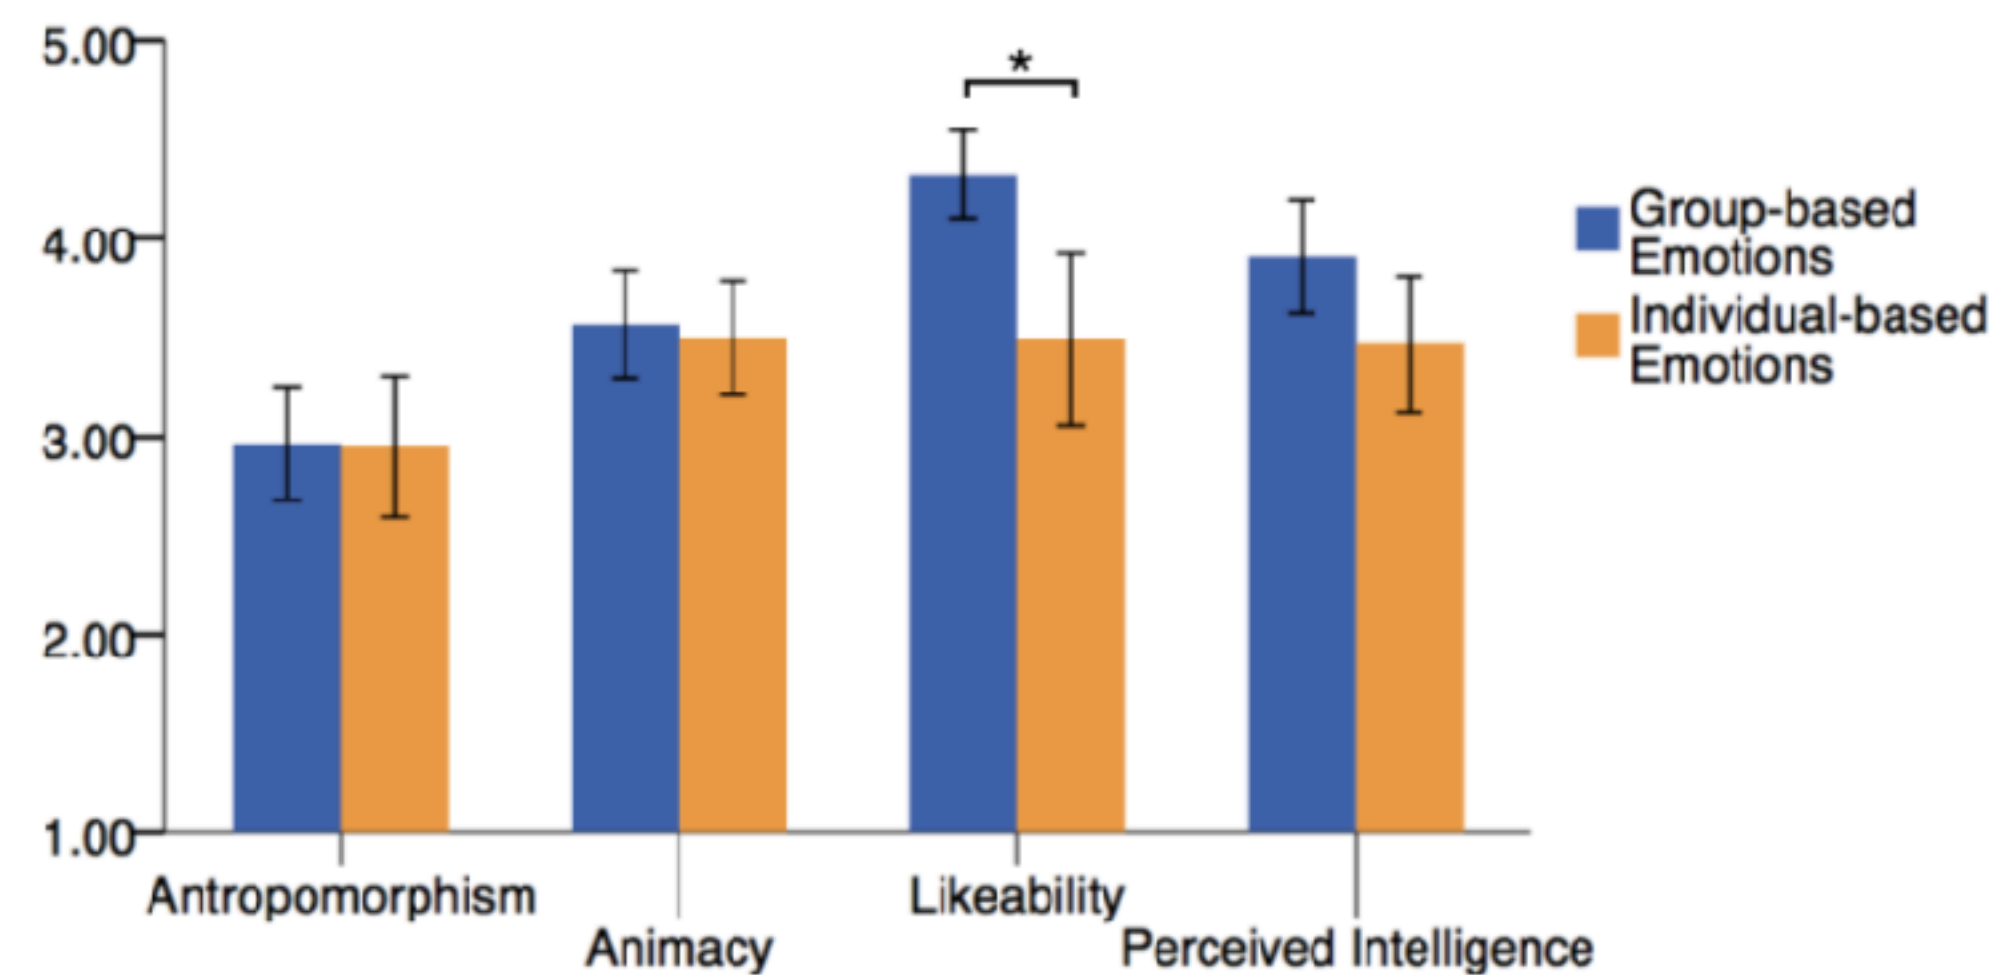

- There was a **non-significant correlation** ( $r_s = 0.158$ ,  $p = 0.28$ ) between **the number of points** of the team and the level of **Group Trust**.

# Results - Perception of the Robot

---

- Results showed **no significant differences** in:
  - Perceived Intelligence ( $U = 200$ ,  $p = 0.07$ ),
  - Animacy ( $U = 275$ ,  $p = 0.79$ ),
  - Anthropomorphism ( $U = 276$ ,  $p = 0.80$ ).

- Participants attributed **significantly higher** levels of **Likeability** to robotic partner with GbE than the robotic partner with IbE.

# Results - Perception of the Robot

---

- There was a **strong, positive**, and statistically **significant correlation** between **Group Identification** and:
  - Anthropomorphism ( $r_s = 0.529$ ,  $p < 0.01$ )
  - Animacy ( $r_s = 0.318$ ,  $p = 0.03$ )
  - Likeability ( $r_s = 0.606$ ,  $p < 0.01$ )
  - Perceived Intelligence ( $r_s = 0.595$ ,  $p < 0.01$ )

# Discussion

---

- **H1**: Participants will have a **stronger Group Identification** with a robotic partner that expresses GbE.

## Discussion

---

H1: Participants will have a **stronger Group Identification** with a robotic partner that expresses GbE.

# Discussion

---

- H1: Participants will have a **stronger Group Identification** with a robotic partner that expresses GbE.
- H2: Participants will have a more **positive perception** of a robotic partner that expresses GbE.

# Discussion

---

H1: Participants will have a **stronger Group Identification** with a robotic partner that expresses GbE.

H2: Participants will have a more **positive perception** of a robotic partner that expresses GbE.

# Discussion

---

H1: Participants will have a **stronger Group Identification** with a robotic partner that expresses GbE.

H2: Participants will have a more **positive perception** of a robotic partner that expresses GbE.

- H3: Participants will have a **higher degree of Group Trust** with a robotic partner that has GbE.

# Discussion

---

H1: Participants will have a **stronger Group Identification** with a robotic partner that expresses GbE.

H2: Participants will have a more **positive perception** of a robotic partner that expresses GbE.

H3: Participants will have a **higher degree of Group Trust** with a robotic partner that has GbE.

# Conclusions

# Conclusions

---

- We defined a **model of GbE** for social robotic partners
- **User study with 2 fully autonomous robots** using the model to generate GbE or IbE
- Our findings can improve interactions and create **effective collaborations in HRI**
- **GbE revealed a promising role on the design of social robotic partners**

# Thank you!
